

Nikita Markovsky

Senior Full-Stack Developer | AI Engineer

Node.js, React, TypeScript, AWS, LLM & RAG Integration

Rehovot, Israel | 052-582-05-75 | nikita.markovskii.dev@gmail.com | linkedin.com/in/nikita-markovsky | github.com/NikitaMarko

PROFESSIONAL SUMMARY

Senior Full-Stack Developer and AI Engineer with 5+ years of experience building production web applications and cloud-native microservices for fintech and consumer platforms. Deep hands-on expertise in TypeScript, React, and Node.js, combined with practical experience integrating AI and LLM tooling (OpenAI API, AWS Bedrock, RAG pipelines, prompt engineering) into real engineering workflows. Track record of designing scalable AWS architectures, leading API and data-model design, and delivering measurable improvements in performance, reliability, and delivery speed within Agile teams.

CORE SKILLS

Languages & Core Technologies: TypeScript, JavaScript (ES6+), Python, Java, HTML5, CSS3, SQL, Bash

Frontend: React, Next.js, Redux Toolkit, React Query, Context API, MUI, Vite, Responsive UI, Component-Based Architecture, SPA, Axios

Backend & APIs: Node.js, Express.js, RESTful APIs, FastAPI, JWT Authentication, OAuth 2.0 / SSO, WebSockets, Microservices, MVC, RBAC, HttpOnly Cookies

AI & LLM Engineering: OpenAI API, AWS Bedrock, LLMs, RAG pipelines, Prompt Engineering, AI-assisted development workflows (Cursor), Claude, Gemini

Databases & Data Layer: PostgreSQL, MongoDB, Prisma, Mongoose, Redis, SQL / NoSQL, ORM / ODM, Schema Design, Query Optimization

Cloud & DevOps: AWS (EC2, S3, Lambda, DynamoDB, RDS, ECS/Fargate, CloudWatch, IAM, VPC, CloudFormation, SAM), Docker, Kubernetes, CI/CD (GitHub Actions, AWS Amplify), Jenkins, Grafana, Linux/Bash, Winston Logging

Tools & Methodology: Git/GitHub, Postman, Swagger/OpenAPI, Jest, Agile/Scrum, Code Review, SOLID, DRY, KISS, Jira, Trello, Confluence, Miro

PROFESSIONAL EXPERIENCE

Senior Full-Stack Developer / AI Engineer | OptimaDevs Ltd, Rehovot, Israel | 2024 – Present

Delivering an end-to-end smart-locker booking platform live across 10+ cities, within a 10+ developer Agile team on bi-weekly release cycles.

- Designed and implemented a cloud-native microservices platform covering the full booking lifecycle: locker inventory management, customer ordering, reservation processing, and payment handling.
- Integrated AI-assisted development workflows (Cursor, LLM-based tooling) into the team's engineering process, reducing development time and improving consistency in architecture and implementation.
- Built independent backend services (Booking Service, Locker Management Service) with Node.js/Express, enabling scalable, independently deployable service units.
- Built booking and locker-management microservices on AWS Lambda to orchestrate complex reservation workflows; used DynamoDB for active bookings, locker availability, and customer state, enabling low-latency, high-throughput access.
- Built a React + TypeScript dashboard with RBAC for 4 user tiers and real-time monitoring across a network of 160+ lockers in 10+ cities using React Query, achieving under 2s initial load time.
- Designed and implemented 65+ RESTful API endpoints with JWT-based authentication (access/refresh tokens via HttpOnly cookies) and role-based authorization; maintained Swagger/Postman/Confluence documentation to reduce integration blockers across product teams.
- Integrated Stripe for real-time payment processing at the point of booking.
- Implemented centralized logging and error handling with CloudWatch alarms, metrics dashboards, and structured logging via Winston.

- Deployed infrastructure with AWS CloudFormation and SAM (frontend on S3, backend on Lambda, ECS/Fargate, Step Functions); implemented IAM policies and VPC isolation for access control.
- Expanded Jest test coverage to 45% and shipped releases through CI/CD pipelines on AWS Amplify/EC2, cutting deployment time by 2x.

Technologies: TypeScript, React, Vite, Node.js, Express, Prisma, PostgreSQL, Docker, Winston, JWT, MUI, AWS (Lambda, S3, ECS/Fargate, CloudWatch, IAM, CloudFormation, SAM, Secrets Manager, Amplify), GitHub Actions, Jira, Trello, Miro, Confluence.

Full-Stack Developer | Luxoft, Zug, Switzerland | 2019 – 2024

- Developed cloud-native microservices with Node.js, React, and AWS; built REST APIs with JWT authentication and event-driven flows using Lambda and S3 triggers.
- Applied AI-assisted development practices (Cursor, LLM-based tooling) to speed up debugging and improve code reliability.
- Implemented centralized logging, monitoring, and alerting via CloudWatch, including structured logs and alarms; deployed backend services to ECS/Fargate and automated infrastructure with CloudFormation and SAM.
- Designed and validated RESTful APIs with Postman; conducted code reviews to catch and resolve bugs early; maintained technical documentation to eliminate integration blockers across teams.
- Containerized services with Docker and configured CI/CD pipelines via GitHub Actions, cutting bug reproduction time by 40% and reducing onboarding time by 2x.
- Expanded Jest test coverage by 35% and implemented structured logging with Winston for improved observability; delivered critical releases on time by coordinating with tech lead and project manager.

Technologies: TypeScript, React, Node.js, Express, Docker, Jest, Postman, PostgreSQL, MongoDB, REST API, Git, MUI, AWS (Lambda, S3, ECS/Fargate, CloudWatch, IAM, CloudFormation, SAM), GitHub Actions, Jira, Trello, Miro, Confluence.

EDUCATION

MSc, Mathematics and Computer Science — Kostroma State University, Russia (2006 – 2011)

LANGUAGES

Hebrew, English
